***Election/Restrictions***

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions, which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-8, drawn to a method of diagnosing the presence of an estrogen responsive cancer comprising measuring ERK8 levels in a biological sample.

Group II, claim(s) 9-12, drawn to an antibody that binds to the amino acid sequence of SEQ ID NO: 1.

Group III, claim(s) 13 and 14, drawn to a device for measuring ERK7/8 levels comprising several ports and zones with an ERK7/8 antibody.

Group IV, claim(s) 15-18, drawn to a method of monitoring the effectiveness of an anti-cancer agent comprising monitoring ERK8 levels.

Group V, claim(s) 19 and 20, drawn to a method for identifying modulators of ERK7/8 activity comprising contacting an ERK7/8 polypeptide with a kinase substrate.

2. The inventions listed as Groups I-V do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The special technical feature recited in claim 1 is a method of diagnosing the presence of an estrogen responsive cancer comprising measuring ERK8 levels in a biological sample. U.S. Patent Application Publication 2006/0019256 A1 (effective filing date June 9, 2003) teaches methods of diagnosing cancer (i.e. breast cancer) by assessing stem cell cancer markers, such as ERK8 within a sample from a subject, see

page 5, sections 0050 and 0059; page 6, sections 0066 and 0067; and page 31, ten lines before section 0119. Therefore, the technical feature recited in claim 1 is not special. Accordingly, the groups are not so linked as to form a single general concept under PCT Rule 13.1.

3. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one

Art Unit: 1643

or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
